Other Info

Skills

Html5, Css3, JavaScript, Typescript, Node.js, Express.js, React.js, Next.js, Redux, Bootstrap, Material UI, Sass, MongoDB, Firebase, Git

About Me

A JavaScript full-stack Web Developer all round with sound understanding of ES6 and above, which includes arrow functions, enhanced object literals, template strings, destructuring, spread and rest operators, global and local scope initialization etc, as well as other JavaScript frameworks like React.js and Next.js. I carry along with me a three years experience in web development and I am very skilled in building highly scalable, responsive and user-friendly websites.

I am also a JavaScript guy when it comes to back-end. I am into Node.js/Express, as well as Next.js for back-end. I am very familiar with MongoDB and Firebase for database.

Experience

2021 -

Smart Technologies | Web Developer

*Tasked with developing company's website using Next.js along with its best practices.

*Creating API end points using Next Js Api Routes.

*Integrating MongoDB(atlas) into the application.

*Creating a highly scalable, user-friendly and highly responsive website.

Languages

English (UK), English (US)

Interest

Coding, Music, Traveling,
Sports, Entertainment

Name: Mr Benjamin Odesanmi

Position: Employer

Phone number:

+2347086411958

Email :

bentouch4uk@yahoo.com

*Proper understanding of git knowledge and basic front-end languages including HTML5, CSS3 and JAVASCRIPT(ES6+).

*Good knowledge of Hosting services, Git and domain related knowledge.

*Ability to work along with designers and other necessary teammates.

Projects

2020 -

Smart Technologies | Wifibase Website

Wifibase is a website under Smart Technologies. It highlights the services and offers of Smart Technologies. It is also a wifi service provider via hotspot, routers, modems, broadband etc.

Application type: It is a full stack website built in Next.js and using Redux for state management and MongoDB(atlas) for database integration. It also features authentication through inputs of username and password and protected routes. The auths password is encrypted using Bcrypt and jwt tokens for effective developing experience as well user experience.

url: <https://wifibase.co>

2021 -

| Crypto Prediction Trading Bot

This is a website that tries to predict the rise and fall of crypto using some complex calculations based on some algorithms at the background.

The project made use of complex crypto APIs to retrieve datas from coin-gecko and manipulating them. It also features the use of Redux for state management and the whole project is built with Next.js.

url: <https://tradebotting.vercel.app>

2021 -

| My Working Goggle Clone Website!

I built this website using a react js framework (Next.Js) with Typescript and added a bit of backend to fetch the user's request and filter the result for the top priority as categorized by the algorithm. It uses Google API, this means all results returned are exactly what a Google search will give you.

Also, I added images, videos and news search tabs to it and they are all working. It is also mobile responsive.

url: <https://rollins-search.vercel.app/search>

2021 -

| My Lyft Clone Website!

This is a landing page built using React js and plain vanilla CSS under 24 hours and with such limited time, the UI of the site is absolutely awesome and worth viewing.

url: <https://rollins-assignment.vercel.app>

2021 -

| Football Highlights Website

This is built using Html, Css and JavaScript. It makes Ajax request to some API and retrieve data, which is then used to display the video of the selected match. It is mobile responsive and overall smooth user-experience

url: <https://scorelite.netlify.app>

2022 -

| A Complete NodeJs (Backend) CRUD/AUTHENTICATION Web App!

I built this using vanilla React.Js with Typescript for Frontend and NodeJs (Express) for the backend. Features include,

*Creating accounts in MongoDB Database with passwords being perfectly encrypted,

*Login securely using JWT tokens and httpOnly cookies,

*Update existing user details, change user password,

*Delete a user,

*Logout ,

*Protected routes (you can't access some routes if not logged in),

*Darkmode!

Despite this is a fully intended backend application, I am very curious about designs; so the UI isn't left out!

url: <https://crudstack-client-side.vercel.app>

2020 -

| Church Website

This is a church website built using Next.Js for both front-end and backend, with MongoDB as database, Redux for state management, GraphCMS for headless CMS, GraphQL for api calls and hosted it on Vercel.

url: <https://truevine.vercel.app>

2021 -

| Chat Application Website

I built this using Socket.io, Next.Js and some very much handy React.Js libraries for front-end, and Node.Js/Express.Js for server-side. It works very similar to Whatsapp.

For state management, I made use of React Context Api and Redux. It is mobile responsive and overall smooth user-experience.
